Level of Harm - Minimal harm or potential for actual harm  Residents Affected - Some	b. During a review of Resident 18's Admission Records indicated the resident was initially admitted on [DATE] and readmitted on [DATE]. The Admission Records indicated Resident 18's diagnoses included unstable angina (condition which the heart does not get enough blood flow and causes unexpected chest pain), chronic obstructive pulmonary disease (group of diseases that block airflow and make it difficult to breathe), and cardiomegaly (condition in which the heart is enlarged).				
		linimum Data Set (MDS), a resident as: t 18 had no cognitive (thought) impairn			
	During a review of the Resident Co regarding her call lights not being a	ouncil minutes dated 3/9/2021 indicated answered in a timely manner.	Resident 18 voiced grieved		
	During an interview on 05/06/21 at 09:02 a.m. Resident 18 stated I have access to my call light. When I use the call light, sometimes the nurses come in and tell me they will come back because they are helping someone else. This problem happens on all shifts. I usually need my diaper change because I'm incontinent. Sometimes I wait about 30 minutes because the nurses forget to comeback.				
	During a concurrent interview and observation on 05/06/21 at 10:05 a.m., Resident 18 pressed her call light. During the observation a green light above Resident 18's room turned on. However, there was no audible alarm sound to alert the staff. During the observation seven staff members were observed passing Resident 18's room without responding to the call light. During the same observation at 10:15 a.m. the call light was answered by a Restorative Nurse Assistant (RNA). The RNA stated Everyone is responsible for answering the call light. There's a light that goes off at the nurse's station and a beeping noise. If someone passes a resident's room and the green light is on then they are supposed to answer the call light. We answer the light and we try to assist them but if we are busy with other residents we are supposed to ask for assistance. We should not tell the resident to wait. We should take care of them right away.				
	c. During a review of Resident 2's Admission Records indicated the resident was initially admitted on [DATE] and readmitted on [DATE]. The Admission Records indicated Resident 2's diagnoses included hemiplegia (paralysis of one side of the body) and hemiparesis (muscle weakness or partial paralysis of one side of the body), muscle weakness, type 2 diabetes (abnormal blood sugar levels), and seizures (bursts of uncontrolled electrical activity in the brain that causes abnormalities in muscle tone or movements).				
	During a review of Resident 2's Minimum Data Set (MDS), a resident assessment and care-planning tool, dated 4/25/2021 indicated Resident 18 had no cognitive (thought) impairment with daily decision making.				
	During a review of the Resident Co lights were not being answered in a	ouncil minutes dated 4/13/2021 indicate a timely manner.	d Resident 2 commented her call

(X4) ID PREFIX TAG	SUMMARY STATEMENT OF DEFICIENCIES (Each deficiency must be preceded by full regulatory or LSC identifying information)				
F 0656	Develop and implement a complete that can be measured.	e care plan that meets all the resident's	needs, with timetables and actions		
Level of Harm - Minimal harm or potential for actual harm	**NOTE- TERMS IN BRACKETS H	IAVE BEEN EDITED TO PROTECT C	ONFIDENTIALITY** 43455		
Residents Affected - Some	Based on interview, and record review, the facility failed to ensure the resident's Care Plans (a document outlining a detailed approach to care customized to an individual resident's need) include measurable objectives and timeframe to meet 12 of 21 residents (2, 7, 11, 25, 26, 32, 41, 42, 56, 57, 172, 173) resident's medical, nursing, and mental and psychosocial needs.				
	Resident 2, 7, 11, 25, 26, 32, 41, 56, 57, 172, 173 who were prescribed insulin (a medication used to treat and regulate abnormal blood sugar) therapy were not adequately monitored for glycated hemoglobin ([HgA1c] blood test that tells the average level of blood sugar over the past 2 to 3 months) to ensure the Interdisciplinary Team ([IDT] involves team members from different disciplines working collaboratively, with a common purpose, to set goals, make decisions and share resources and responsibilities) in managing the resident's diabetes.				
	Residents 2, 7, 11, 25, 26, 41, 57, 172, and 173 did not have routine HgA1c levels ordered to monitor the resident's goals and outcomes for the diagnosis of diabetes (a condition characterized by high levels of bloo sugar which damage the heart, eyes and kidneys [pair of organs responsible for filtering waste materials out of the blood and passing them out of the body as urine, and regulating blood pressure of the body]) as per standard of practice. These deficient practices had the potential to cause Residents 2, 7, 11, 25, 26, 41, 57, 172, 173, to receive suboptimal (less than the highest standard or quality) care related to diabetes, to not know how their blood sugar (BS) levels were managed and if the current insulin therapy was adequate coulc lead to serious health complications such as damage to important organs such as the heart, kidneys, eyes and the nervous system.				
	of a terminally ill patient's pain and	resident centered Care Plans for hospi symptoms and attending to their emoti lead to Resident 32 and 56 not receive	onal and spiritual needs at the end		
	Resident 42, who was refusing the administration of Lovenox (blood thinner) did not have Care Plan formulated to address the refusals and to perform blood laboratory as ordered and report to the primary physician. However, the facility did not perform any labs during the duration of Lovenox therapy.

F 0656  Level of Harm - Minimal harm or potential for actual harm	On 5/8/21 at 10:25 A.M., during interview Registered Nurse (RN 1) stated Resident 42 receives Lovenox and Aspirin therapy as result of abdominal surgery. RN 1 stated the resident refused the Lovenox most times and questions reason why and how long the therapy was to continue. During interview RN 1 stated the facility had not yet informed the prescribing physician about the resident's refusals.		
Residents Affected - Some	On 05/11/21 at 10:08 A.M., during record review of Pharmacy Medication Regimen Review (MRR) dated 4/1/21 and 4/29/21, indicated Resident 42 had been receiving Lovenox subcutaneous every 12 hours along with Aspirin 81 mg. The MRR notes indicated the Consultant Pharmacist recommended to re-evaluate the need for both Lovenox and Aspirin. The notes indicated this combination may lead to increased risk for bleeding and increasing clotting time.		
	On 05/11/21 at 10:08 A.M., during MRR review the Pharmacy Consultant recommended Resident 42 Lovenox be monitored by conducting basic metabolic panel ([BMP] a group of 8 tests that measures several substances in the blood) and complete blood count ([CBC] a group of tests that evaluate the cells that circulate in blood) every 2 weeks while on the medication. However, the recommendations were not Care Planed as part of the goals and interventions.

F 0919 Level of Harm - Minimal harm or potential for actual harm Residents Affected - Few	SUMMARY STATEMENT OF DEFICIENCIES Each deficiency must be preceded by full regulatory or LSC identifying information)  Make sure that a working call system is available in each resident's bathroom and bathing area.  39028  Based on observation, interviews, and record review facility failed to ensure one of one sampled residents (Resident 60) had the call light within reach.  This deficient practice had the potential for accidents, including falls, and resulted in the delay of assisting Resident 60 with a drink of water.  Findings:  A review of Resident 60's undated admission record indicated the facility admitted Resident 60 on 4/11/21.  Resident 60's diagnoses included acquired absence of right leg below knee, muscle weakness, gangrene (tissue death caused by lack of blood supply), sepsis (A life-threatening complication of an infection).  A review of Resident 60's Minimum Data Set (MDS), an assessment and care-screening tool, dated 4/18/21, and from bed, chair or a standing position, moving from one location to another, dressing, eating, tolet use, and formo bed, chair or a standing position, moving from one location to another, dressing, eating, tolet use, and personal hygiene.  A review of care plan for activities of daily living (ADL - activities necessary for independent living), dated 4/12/21, indicated Resident 60 had a self-care deficit. The care plan indicated Resident 60 required extensive assistance from staff or ADLs. There care plan indicated that staff were to encourage the use of the call light for assistance and to extensively assist Resident 60 was observed raising their right hand. During a concurrent interview with Resident 60, Resident 60 stated he needed help getting up and needed to drink water. Resident 60's call light was sobserved to move the call light twise placed behind Resident 60 feed a drink of water. DON 1 confirmed that Resident 60 stated he needed help getting up and needed to drink water. Resident 60's call light was sobserved to move the call light within reach for Resident
